

Writing Task

Write an information report about the animals in African Savanna.

Wonderful African Savanna

African Savanna is an open landscape of grasslands. It is in tropical Africa. It is hot and dry, and has a season of heavy rains. Zebras, elephants, lions and cheetahs can survive there.

Pythons

Pythons are large snakes. They are nonvenomous. They have heat sensors for tracking down their body warmth. They kill very large warm-blooded prey. They eat backboned animals, up to the size of deer.

Lions

Lions have strong bodies and spotted fur. They can hunt to feed the group. Male lions have manes. They eat animals like wildebeest, zebras, antelope, rodents, baboon and water buffaloes. They are the only animals to live in groups.

Elephants

Elephants are the largest land animal on Earth and have the biggest brain in the animal world. They have a long, flexible nose called a trunk. They have large fan-shaped ears. They can take dust baths with the help of their trunks by sucking up dust through their trunks and lifting it up and blowing it out all over their head and back.
